

Data Sheet

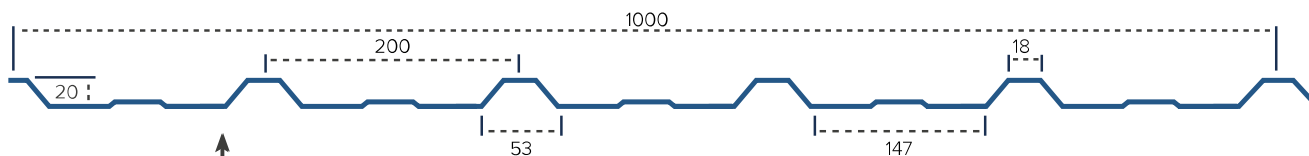

FORECLAD Liner Panel - FL

Foreclad FL200 is an internal liner panel that can be used on both walls and ceilings. This is supplied in 0.4mm steel.

As with plastisol material, the polyester painted steel sheets also have a backing coat to offer a degree of protection to the reverse of the sheet.

The steel is coated in bright white polyester paint and is intended for internal applications. White is chosen due to its good light reflectivity.

* White liner face to the under side of the sheet as standard.

DIMENSION DETAILS
